The Curb-Cut Effect
By Angela Glover Blackwell
One evening in the early 1970s, Michael Pachovas and a few friends wheeled themselves to a curb in Berkeley, Calif., poured cement into the form of a crude ramp, and rolled off into the night. For Pachovas and his fellow disability advocates, it was a political act, a gesture of defiance. “The police threatened to arrest us,” Pachovas recalls. “But they didn’t.” It was also pragmatic. Despite their unevenness, the makeshift sloping curbs provided the disabled community with something invaluable: mobility. At the time, getting around Berkeley—or any American city—in a wheelchair was not easy. The Architectural Barriers Act of 1968 required government buildings to make themselves universally accessible, but traversing the streets in a wheelchair resembled the running of an obstacle course: Wheel to the driveway in an alley or at a loading dock; roll into the street until you reached another driveway; hope all the while that a truck didn’t pull out. Students with disabilities at the University of California, Berkeley, housed in Cowell Hospital—the only space that could accommodate them—planned their class schedule according to which class was downhill from the previous one.

Yet this was Berkeley in the era of political activism. There was a Free Speech Movement, an antiwar movement, a civil rights movement. Why not a movement for movement? Pressed by disabled activists, in 1972 the city installed its first official “curb cut” at an intersection on Telegraph Avenue. It would become, in the words of a Berkeley advocate, “the slab of concrete heard ‘round the world.”

Curb cuts were not an entirely new invention—the first appeared in 1945, in Kalamazoo, Mich. But the one on Telegraph changed the way the country thinks about access and opportunity for a population that has faced barriers at every turn. This turnabout and the remarkable ripple effects are salient today, as the nation confronts the anguish of rising inequality and the mounting barriers to economic mobility.

Hundreds more curb cuts followed Berkeley’s. Then hundreds of thousands, all across the country. Disabled advocates continued to push for access to the basics that many Americans take for granted—sidewalks, classrooms, dorm rooms, restrooms, buses. At last, on July 26, 1990, President George H.W. Bush signed the landmark Americans with Disabilities Act, which prohibits disability-based discrimination and mandated changes to the built environment, including curb cuts. “Let the shameful wall of exclusion finally come tumbling down,” he proclaimed.

Then a magnificent and unexpected thing happened. When the wall of exclusion came down, everybody benefited—not only people in wheelchairs. Parents pushing strollers headed straight for curb cuts. So did workers pushing heavy carts, business travelers wheeling luggage, even runners and skateboarders. A study of pedestrian behavior at a Sarasota, Fla., shopping mall revealed that nine out of 10 “unencumbered pedestrians” go out of their way to use a curb cut. As journalist Frank Greve has noted, the barricades stormed by disabled advocates in Berkeley 40 years ago were a few inches high, “yet today millions of Americans pass daily through the breaches.”

An economist might call it a “positive externality.” A military officer might call it a “force multiplier.” I like to think of it as the “curb-cut effect”—and it’s changing the way the country thinks about the struggles of the most vulnerable communities.
ACCESS, OPPORTUNITY, AND THE NEW DEMOGRAPHICS

There’s an ingrained societal suspicion that intentionally supporting one group hurts another. That equity is a zero sum game. In fact, when the nation targets support where it is needed most—when we create the circumstances that allow those who have been left behind to participate and contribute fully—everyone wins. The corollary is also true: When we ignore the challenges faced by the most vulnerable among us, those challenges, magnified many times over, become a drag on economic growth, prosperity, and national well-being.

This has become painfully evident as inequality has reached toxic levels in the United States. Since 1979, the income of workers in the top 10 percent has grown nearly 15 percent.\(^\text{10}\) For workers in the bottom 10 percent, incomes have fallen more than 11 percent.\(^\text{11}\) The top 25 hedge fund managers earn more than all kindergarten teachers in America put together.\(^\text{12}\) Only 9 out of 100 children born to parents in the bottom fifth of the income distribution can expect to rise above their circumstances, the cornerstone of the American Dream.\(^\text{13}\)

A wave of recent publicity has focused attention on the toll that these trends are taking on white America. In a paper published in November 2015 in the Proceedings of the National Academy of Sciences, Princeton University economists Anne Case and Angus Deaton revealed that the death rate for middle-aged whites without a college education jumped more than 20 percent from 1999 to 2013,\(^\text{14}\) a staggering increase attributable largely to drug- and alcohol-related deaths and suicides. Case and Deaton see the spikes in addiction and suicide as a response to financial insecurity and economic despair. They write: “After the productivity slowdown in the early 1970s, and with widening income inequality, many in the baby boom generation are the first to find, in midlife, that they will not be better off than were their parents.”

While commentators debate the extent to which economic shock is driving white mortality, one thing is indisputable: Economic distress is deepest and the inequities are widest in communities of color. In 149 of the country’s 150 largest metro areas, the percentage of college-educated whites exceeds the percentage of African-Americans and Latinos with college degrees.\(^\text{15}\) The national unemployment rates for blacks and Latinos are 9.5 percent and 6.5 percent, respectively, compared with 4.5 percent for whites.\(^\text{16}\) One in four black and Latino Americans live in poverty, more than twice the rate for whites.\(^\text{17}\) People of color lag well behind whites on just about every measure of well-being, including health, homeownership, wealth, and (Case and Deaton notwithstanding) longevity.

The point is not to argue who is suffering more, but to identify the best solutions to remedy these inequities. And here, another number should command attention: 2044. That is the year when the nation—80 percent white in 1980, 63 percent white today—\(^{19}\) is already well on its way. Since 2012, the majority of babies born in the United States have been children of color.\(^\text{20}\) By the end of the decade, the majority of Americans under age 18 will be people of color.\(^\text{21}\)

These demographic shifts matter to every American. Not because there is something frightening about a nation where whites are no longer the majority. Rather, it is because the costs of society failing people of color are climbing as the population grows—and because the benefits of strategies that expand opportunity for people of color would extend to all. Knock down walls of exclusion and build accessible pathways to success, and everyone gains.

The curb-cut effect applies to America’s new demographic profile in two important ways. First, curb-cut thinking is animated by the idea of equity. This should not be confused with the formal legal equality conferred by landmark laws such as the Civil Rights Act. Equality gives everyone the right to ride on the bus. Equity ensures that there are curb cuts so people in wheelchairs can get to the bus stop and lifts so they can get on the bus, and ensures that there are bus lines where people need them so they can get to wherever they need to go. Equity means promoting just and fair inclusion throughout society and creating the conditions in which everyone can participate, prosper, and reach his or her full potential.

Second, the curb-cut effect illustrates the outside benefits that accrue to everyone from policies and investments designed to achieve equity. The country must choose: Will we make these investments? Will we make sure that everyone has access to the essentials for living productive lives—things like jobs and reliable transportation? Or will we neglect entire communities and waste the talents and potential of tens of millions of people?

There’s really no choice. Continuing to write off poor people and people of color is not an option. Not when the American Dream is nearly unattainable for all low-income people, regardless of their ethnicity. Not when age-old health disparities between whites and people of color are narrowing because whites are sicker than they used to be and more are dying younger. Not when popular fury is growing over an economic system in which a single American family (the Waltons) has more wealth than 41 percent of Americans combined.\(^\text{22}\)

 Policymakers tend to overlook the ways in which focusing on one group might help all groups and strengthen the whole nation. Cut into the curb, and we create a path forward for everyone.

Curb-Cut Effects, From Streets to Schools to the Sky

Once you know what you’re looking for, the curb-cut effect is on display all around. It happened when seat belt legislation, adopted initially to protect young children, led 49 states to adopt seat belt laws that have saved an estimated 317,000 lives—children and adults—since 1975.\(^\text{23}\) It happened when affirmative action was created to open the doors of higher education to black people—and ended up emboldening vast numbers of white women, and other racial and ethnic groups, to push for greater access as well. It happened when fed-up flight attendants spearheaded a national fight to end smoking on planes, setting in motion a decades-long public-health campaign that has largely banished smoking from public spaces and cut tobacco consumption in half since the 1960s.\(^\text{24}\)

And it happened, spectacularly, with another improvement to America’s streets: bike lanes. After years of enduring injuries and fatalities, beleaguered bicyclists—backed by environmental advocates—have pressured a number of cities to install protected bike

ANGELA GLOVER BLACKWELL is the CEO of PolicyLink. She was previously a senior vice president at the Rockefeller Foundation and a partner at the public interest law firm Public Advocates. She is also the coauthor of Uncommon Common Ground: Race and America’s Future, Norton, 2010.
lanes. As of 2014, New York City had added roughly 30 miles of these lanes.\textsuperscript{25} My hometown of Oakland is installing a similar amount.\textsuperscript{26}

The verdict? In city after city, despite a “bike-lash” of critics who warn of more congestion and less parking, we’ve seen that—like a bicycle wheel—what goes around comes around. From 2000 to 2013, the risk of serious injury dropped 75 percent for New York City cyclists\textsuperscript{27}—and pedestrians, a much larger group and not the intended target of the bike lanes, are 40 percent less likely to be injured.\textsuperscript{28} In a 2011 survey of Chicago drivers, half believed that they noticed improved driving behavior on a street with bike lanes.\textsuperscript{29}

In addition to creating safer and saner streets, bike lanes add tremendous economic value to a neighborhood. One stretch of Ninth Avenue in Manhattan saw retail sales rise nearly 50 percent after bike paths were installed, compared with a 3 percent rise borough-wide.\textsuperscript{30} Rents along the Times Square bike paths grew 71 percent in 2010, the largest increase in the city, as people flocked to pedestrian- and bike-friendly neighborhoods.\textsuperscript{31} A single block in Indianapolis saw the value of its property jump nearly 150 percent after adding bike lanes.\textsuperscript{32}

Then there are the benefits to public health and the environment. A study of the San Francisco Bay Area found that a slight increase in walking and biking each day can reduce the prevalence of diabetes and cardiovascular disease by 14 percent,\textsuperscript{33} while decreasing greenhouse gas emissions by 14 percent as well.\textsuperscript{34} If just 5 percent of New York City commuters began biking to work, the CO2 emissions saved would be equal to planting a forest 1.3 times the size of Manhattan.\textsuperscript{35}

THE MAKING OF A MIDDLE CLASS

The most illuminating example of the curb-cut effect is the Serviceman’s Readjustment Act of 1944, more commonly known as the GI Bill. It’s no overstatement to say that the legislation created the white American middle class. The sponsors of the bill, initially scrawled by an American Legion lobbyist on a piece of hotel stationery, didn’t expect to do more than provide job training to some World War II veterans looking to reintegrate into society.\textsuperscript{36} Supporters of the legislation predicted that just a few hundred thousand of the 16 million returning veterans would use it to go to college. Even that was too much for educators like Robert Hutchins, the president of the University of Chicago, who direfully predicted that campuses would be turned into “hobo jungles.”\textsuperscript{37}

To the surprise of nearly everyone, nearly eight million veterans went to college on the GI bill,\textsuperscript{38} and contrary to Hutchins’ warning, they earned better grades, on average, than their civilian classmates. Journalist Edward Humes has catalogued their ranks to include 14 future Nobel Prize winners, three Supreme Court justices, three presidents, a dozen senators, 22,000 dentists, 67,000 doctors, 91,000 scientists, 238,000 teachers, and 450,000 engineers, along with numerous lawyers, nurses, businessmen, artists, actors, writers, and pilots.\textsuperscript{39} New campuses sprang up to handle the influx, including Claremont McKenna College, Marlboro College, and the State University of New York at Binghamton. In 1944, the United States was home to 38 two-year community colleges. By 1947, there were 358.\textsuperscript{40}

The results of the bill, however, could have been even better. The GI Bill included black veterans in the deal but let local governments decide how to allocate the money. All too predictably, black GIs received much, much less generous subsidies.\textsuperscript{41} The bill that opened doors of opportunity to so many people who had previously been left out effectively barred entry for too many others.

Despite its shortcomings, the GI Bill demonstrates the transformative effects of smart, targeted investments. The beneficiaries did not just rejoin society; they remade it. The second pillar of the GI Bill, low-interest home loans, boosted homeownership from 44 percent before the war to 60 percent by the mid-1950s.\textsuperscript{42} (Here, again, black GIs were largely excluded.) This, in turn, spurred the tremendous growth of the suburbs and buoyed an already-booming economy. All told, historians estimate that for every $1 invested in returning World War II veterans, the country recouped $8.\textsuperscript{43} But the true benefits are incalculable.

CREATING A PROSPEROUS FUTURE

Many years ago, trying to get across Los Angeles to a job interview in Watts, I budgeted an hour and a half to take the five buses from my house to my destination. Two and a half hours later—well after my interview would have ended—I got off bus number four and turned around, defeated.

Frustration like this—to say nothing of lost opportunity—reflects a reality still common to people of color living in low-income neighborhoods. Connections to jobs, schools, hospitals, and grocery stores, and often to each other, are few and far between. One in five African-Americans—and 12 percent of Latinos—live in households without access to a car.\textsuperscript{44} Two-thirds of the roads on Native American reservations are unpaved.\textsuperscript{45} Half of the people who use public transit are people of color, yet far too many cannot get where they need to go.\textsuperscript{46}

The verdict? In city after city, despite a “bike-lash” of critics who warn of more congestion and less parking, we’ve seen that—like a bicycle wheel—what goes around comes around. From 2000 to 2013, the risk of serious injury dropped 75 percent for New York City cyclists—and pedestrians, a much larger group and not the intended target of the bike lanes, are 40 percent less likely to be injured. This, in turn, spurred the tremendous growth of the suburbs and buoyed an already-booming economy. All told, historians estimate that for every $1 invested in returning World War II veterans, the country recouped $8. But the true benefits are incalculable.

Creating a prosperous future

Many years ago, trying to get across Los Angeles to a job interview in Watts, I budgeted an hour and a half to take the five buses from my house to my destination. Two and a half hours later—well after my interview would have ended—I got off bus number four and turned around, defeated.

Frustration like this—to say nothing of lost opportunity—reflects a reality still common to people of color living in low-income neighborhoods. Connections to jobs, schools, hospitals, and grocery stores, and often to each other, are few and far between. One in five African-Americans—and 12 percent of Latinos—live in households without access to a car. Two-thirds of the roads on Native American reservations are unpaved. Half of the people who use public transit are people of color, yet far too many cannot get where they need to go.
shifted half of their transportation budget from funding highways to funding transit. **49** No new spending, just shifting our priorities.

Businesses would benefit, too. A Harvard Business School survey of business leaders’ priorities found that more and better public transportation was at the top of their wish list, **50** and it’s easy to see why. Better transportation leads to less absenteeism, and it gives businesses a larger pool of candidates to choose from to fill the available jobs. **51** In a 2013 study, urban planning scholar Daniel Chatman of the University of California, Berkeley, and Robert Noland of Rutgers University calculated that when metro areas added even just a few bus or rail seats—four for every 1,000 residents—this increased the number of employees working in the central city by 320 per square mile, nearly a 20 percent increase on average. **52** Similarly, the researchers found that expanding public transit 10 percent boosted the city’s total economic output between 1 and 2 percent. Chatman and Noland estimate that the “hidden economic value” of public transit was $45 million in the average metro area, with a range between $1.5 million and nearly $2 billion depending on the size of the region.

The ripples don’t end there. When people have access to public transit, they can more easily attend good schools and take advantage of higher education, which creates a more prepared workforce for the region. They can more readily get to health clinics and hospitals, allowing for greater preventive care and lower health care costs. Evidence also suggests that public transit leads to a decrease in crime. Simply put, better transit means better access to opportunity. Indeed, the pioneering Stanford University economist Raj Chetty has identified the top 10 cities for upward economic mobility. Five of them—New York, San Francisco, Boston, Washington, D.C., and Seattle—are also in the top 10 for physical mobility. **53**

To maximize benefits like these, metropolitan regions around the country are rethinking their transportation strategies and investments. The neighboring cities of Minneapolis and St. Paul offer a glimpse of how this is playing out. People of color—more than a quarter of whom are poor—have long been concentrated in disinvested neighborhoods and cut off from opportunity. **54** Initial plans for a new Green Line light-rail corridor overlooked these neighborhoods—reminding me of Bullard’s observation, “Follow the usage statistics, the traditional metrics for transportation considerations—and has become central to transportation decisions.

The Green Line is a model of inclusive growth. People of color have made up nearly a fifth of the work hours on the project. **55** Women- and minority-owned small businesses have earned nearly 20 percent of construction contracts, worth $15 million. **56** The light rail now stops in previously neglected neighborhoods, connecting those residents to more robust job markets in downtown Minneapolis and St. Paul.

The nation can apply curb-cut thinking far beyond transportation infrastructure, to strengthen the entire economy. The misshapen way in which the economy has grown is a problem not only for those at the bottom. As everyone from the OECD **60** to the International Monetary Fund **61** has concluded, widening inequality leads to declining economic growth. When a country fails to include a large number of people in its economy—when it restricts the circle of opportunity—the economy is weakened and the whole nation suffers.

There’s no mystery about how to decrease inequality and increase economic growth. The answer is not easy credit or subprime mortgages or the privatization and parceling off of the social safety net. The antidote to inequality is equity. That means growing good jobs and improving the pay and quality of low-wage jobs. It means building human capabilities by upgrading the education and skills of today’s workforce, and tomorrow’s. It means eliminating barriers to economic inclusion and civic participation—for example, by revamping a criminal justice system that has trapped seven million people, the vast majority of them black and brown. **62** And it means expanding opportunity by investing in the most distressed places in America, and in the people who live there.

If the chasm between the gleaming skyscrapers of Manhattan and the barrios of East Los Angeles is holding the entire country back and limiting American economic potential, just think what closing that chasm with well-chosen policies would do. In 2012, blacks, Latinos, and Asian businesses grew more than three times faster than white-owned businesses **63**—so imagine the entrepreneurial energy waiting to be unleashed if the country strengthens programs to boost business owners of color. Imagine the impact of connecting poor people and young people of color to high-growth industries like technology. The term “equity” in a corporate context is currently defined as a mere tally of assets and liabilities. But with racially diverse companies 35 percent more likely to outperform their peers, **64** imagine the rewards to be reaped if equity came to mean so much more.

Shrinking the racial gap in the US economy—simply employing and paying workers of color at the same rates as white workers—would boost the total GDP of America’s 150 largest metro areas by nearly a quarter. **65** New York City metro would add 31 percent—$409 billion—to its GDP. Miami’s GDP would grow 41 percent, adding nearly $113 billion. In Brownsville, Texas, GDP stands to grow 131 percent. In total, building a racially equitable economy would add $2.1 trillion to America’s annual GDP.

The curb-cut effect underscores the foundational belief that we are one nation, that we rise or fall together. Without equity, there can be neither progress nor prosperity. Despite years of politicians insisting otherwise, the laws of economic gravity have always run in reverse. Opportunity doesn’t trickle down; it cascades out and up.

The initiatives described here are not handouts or giveaways; they are investments in the broader well-being of society. They are highly efficient. They are not a sweeping takeover by the federal government. In fact, many—if not most—rely on policies implemented at the state and local levels.

This is not a liberal or a conservative issue. It is not strictly a question of morality or efficiency. All of us—Democrats and Republicans, businesses and nonprofit organizations, city dwellers and suburbanites alike—have an interest in developing targeted, achievable reforms that yield real results and make noticeable differences in the lives of our most vulnerable. The inescapable conclusion is that it is right and smart to let hard-working Americans see more of the benefits of their hard work. It is right and smart to give more Americans, indeed all Americans, the chance to contribute to this country. It is right and
smart to build a future in which every American, regardless of skin color or economic quintile, can participate and prosper. What is called for is nothing less than a return to the notion of a common good.

Half a century ago, Dr. Martin Luther King Jr. prophetically wrote from a Birmingham, Ala., jail cell, “We are caught in an inescapable network of mutuality, tied in a single garment of destiny. Whatever affects one directly, affects all indirectly.” Outside that building today, a plaque commemorates its most famous inmate. Along the sidewalk, at regular intervals, are curb cuts.
